THE CONFLOW BELT WETTING SYSTEM INCORPORATES THE CODE 100 AUTOMATIC WATER CONTROL VALVE TO CONTROL THE FLOW OF WATER TO DUST SUPPRESSION SPRAYS BY MECHANICALLY SENSING THE MOVEMENT OF THE CONVEYOR BELT.

- Movement of the conveyor belt causes the wheel to rotate which opens a valve to allow water to flow.
- Device can be installed to allow water flow to dust suppression sprays for both top and/or bottom belt spraying.
- Spray bars supplied to suit type of structure and belt widths from 18” to 96”.
- System suited for use on belts with mechanical fasteners.
- Various options on type of spray available to suit application.
- Simple design provides ease of installation and maintenance.
